

Why Fiber ProTector?

What are the remarkable differences compared to other products?

Category: Wear and Tear

FIBER PROTECTOR

VS

OTHER PRODUCTS

Stain Protection

Fiber ProTector® creates an invisible shield against oil and water-based stain causing liquids and soil types. It even provides a reduction in damage causing UV exposure.

Other protection products provide a basic level of protection from some oil and water-based liquids. Few protection products have any UV protection qualities at all.

Long Life

Fiber ProTector's nanotechnology-based formula makes a penetrating bond. Although no protection product will last forever, Fiber ProTector® will provide superior protecting performance for many years and will survive many professional cleanings.

Traditional surface barrier protection products can be removed easily by normal wear and professional cleanings. These topical treatments will need reapplication every 6 to 12 months or after professional or DIY cleanings.

No Silicone

Fiber ProTectors® proprietary formula contains no Silicone. Never has...never will!

Many well-known protection products contain Silicone. Silicone has been known to cause a yellowing effect to some fibers and as it breaks down, actually becomes a soil attractant and voids most textile manufacturers warranties.

Fiber Wear

Fiber ProTector® reduces surface tension. This prevents damage causing particles from attaching to fibers and reduces fiber to fiber contact which leads to fiber wear.

Other protection products provide time limited protection and will need more frequent reapplications for long term performance. Every 6 to 12 months or after professional or DIY cleanings.
