

Why Fiber ProTector?

What are the remarkable differences compared to other products?

Category: Safety & Toxicity

FIBER PROTECTOR

VS

OTHER PRODUCTS

Non-Toxic

Fiber ProTectors® formula contains no harmful PFOA or PFOS Ingredients. Fiber ProTector is the only protection product in the world to earn the EnviroSeal® certification! EnviroSeal® is an evaluation and certification for environmentally responsible maintenance products suitable for use on carpets, rugs and furnishing fabrics.

Other protection products utilize outdated, harmful chemical that contain PFOA and PFOS which have been shown to be extremely persistent chemicals, both in the environment and in human tissue. Recent studies have linked these chemicals to serious damage to the immune systems in children.

Bacteriostatic

Fiber ProTector® mechanically creates a clinically proven Bacteriostatic environment on textiles it is applied to. This "Bac-Stat" Environment has been tested to show a 99.9% reduction in mould, mildew and bacteria propagation.

Other protection products have no known benefit of performance in this area.

Safe for Contact

Fiber ProTector® has been clinically proven via independent third party testing to be harmless to humans. Fiber ProTector® is chemically inert once it has dried.

Many Protection products contain ingredients that are known to have irritant causing effects to humans. (In some cases, capable of producing serious health issues.)

Fluorocarbons

Fiber ProTector® proprietary formula has been laboratory verified to contain no Fluorocarbons whatsoever.

Some of the most recognizable names in protection products are fluorocarbon based.

Fluorocarbons are industrial chemicals that produce potent greenhouse gases, and some form toxic compounds that can accumulate in the environment.
