

# Decorgard®

VS

# Other Products

Decorgard creates an invisible shield against oil and water-based stain causing liquids and soil types. It also provides a reduction in damage causing UV exposure.

STAIN PROTECTION

Other protection products provide a basic level of protection from some oil and water-based liquids. Few protection products have any UV protection qualities at all.

Decorgard's nanotechnology-based formula makes a penetrating bond. Although no protection product will last forever, Decorgard will provide superior protecting performance for many years and will survive many professional cleanings.

LONG LIFE

Traditional surface barrier protection products can be removed easily by normal wear and professional cleanings. These topical treatments will need reapplication every 6 to 12 months or after professional or DIY cleanings.

Our circular economy-centric formulas extend the lifespan of textiles, reduce maintenance needs, are safe for the environment and free from harmful chemicals like PFOA, PFOS, PFAS, APEO, silicone, and fluorocarbons.

CIRCULAR ECONOMY

Many protection products contain silicone, which can yellow fibres and attract soil as it breaks down. This undermines textile longevity and voids most manufacturers' warranties, hindering sustainable practices.

Decorgard's formula contains no harmful PFOA or PFOS Ingredients. Decorgard is one of the few protection products in the world to earn the EnviroSeal certification. EnviroSeal is an evaluation and certification for environmentally responsible maintenance products suitable for use on carpets, rugs and furnishing fabrics.

NON TOXIC

Other protection products utilize outdated, harmful chemicals that contain PFOA and PFOS which have been shown to be extremely persistent, both in the environment and in human tissue. Recent studies have linked these chemicals to causing serious damage to a child's immune system.

Decorgard mechanically creates a clinically proven Bacteriostatic environment on textiles it is applied to. This "Bac-Stat" Environment has been tested to show a 99.9% reduction in mould, mildew and bacteria propagation.

BACTERIO-STATIC

Other protection products have no known benefit of performance in this area.

Decorgard reduces surface tension. This prevents damage causing particles from attaching to fibres and reduces fibre to fibre contact which leads to fibre wear.

FIBRE WEAR

Other protection products provide time limited protection and will need more frequent reapplications for long term performance. This is usually every 6 to 12 months or after professional or DIY cleanings.

Decorgard has been clinically proven via independent third party testing to be harmless to humans. Decorgard is chemically inert once it has dried.

SAFE FOR CONTACT

Many protection products contain ingredients that are known to have irritant causing effects to humans, in some cases, capable of producing serious health issues.

Decorgard proprietary formula has been laboratory verified to contain no Fluorocarbons whatsoever.

FLUORO-CARBONS

Some recognizable names in protection products are fluorocarbon based. These industrial chemicals produce potent greenhouse gases, and some form toxic compounds that can accumulate in the environment.
